THE ATTRACTIVE SOLUTION

Discover Hupfer's price-performance winner with the Norm 25 shelving system and experience quality without compromise. The Norm 25 shelving system from Hupfer brings with it the features of the popular Norm 5 and Norm 20 shelving series - **and at a price that is second to none.**

It's the mix that does it: The combination of Norm 5 shelving uprights with supports from the Norm 25 series **not only sustainably optimises your costs, but also gives you maximum flexibility in storage with shelf loads of up to 150 kg.**

Corrosion protection

Resilience

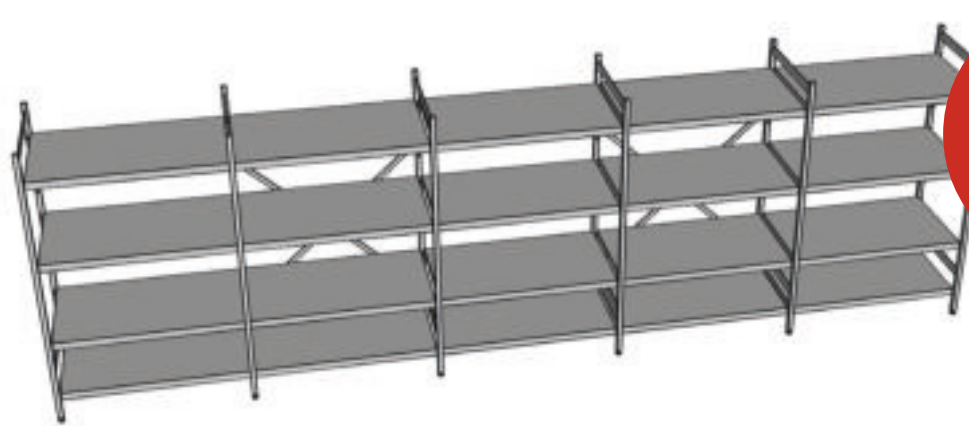

SAME, SAME BUT DIFFERENT

The standard 25 shelves are made of the material 1.4509. This material is often perceived as inferior to 1.4301. **A perception that cannot be upheld in view of the facts.**

Both alloys have a high chromium content. This is primarily important for corrosion resistance and proves that 1.4509 is almost as good as 1.4301 in this respect. **It is not for nothing that 1.4509 has been used successfully for decades in the automotive industry for the production of exhaust systems, among other things, and by premium washing machine manufacturers for the production of washing drums.**

And the magnetic material should also be considered in commercial kitchens, especially for shelving. When using Norm 5 shelf uprights, the same load capacity of 150 kg per upright can be achieved with Norm 25 shelf supports - **and at a much lower price.**

Norm 20
2.315 €

Norm 25
1.992 €

A picture from yesterday: Thanks to its high chromium content, the material 1.4509 is similarly resistant to corrosion as 1.4301.

Widely used: The material 1.4509 is used primarily in the automotive industry, in the construction of refrigeration cells, but also in the production of premium washing drums.

*Discountable gross list price according to configuration: 5,000 mm total width with 20 closed shelves 500 mm deep and 1,800 mm high shelf uprights, single-origin.
