Product overview

HUPFER

we make work flow

Table of contents

Our most successful product is customer satisfaction

Our success story began with metalworking and wire mesh production, and we have added many exciting new chapters to it over the years. Our philosophy and actions have always been determined by our understanding of quality, our instinctive grasp of precision and our aspiration to always offer the best possible solutions.

We have continually grown along with the challenges and expectations of our customers. Today Hupfer is a specialist for kitchen and sterile supplies logistics, offering bespoke "Made in Germany" concepts appreciated by more and more customers around the world.

Outstanding quality down to the finest detail

Quality is our unmistakable trademark, from material and workmanship right through to functionality, safety, service and punctual delivery. We ensure this with our state-of-the-art planning and manufacturing technology, carefully chosen suppliers and partners, and comprehensive quality assurance.

But above all it is our highly trained employees who characterise the Hupfer brand. From development to delivery, they build every product using their expertise and craftsmanship, ensuring Hupfer quality right down to the finest detail.

Tested safety right from the start

Hupfer is a developer and manufacturer of Class I medical devices and has a certified management system according to ISO 9001 and ISO 13485. Our solutions guarantee the highest quality and functional reliability from technology to service.
Your partner for innovative
sterile supplies logistics

At Hupfer we develop our products and systems based on a deep understanding of the logistical structures and individual requirements of clinics and medical departments.

As specialists for sterile supplies logistics, we offer integrated solutions for supplying and disposing of sterile goods. Whether packaging, sterilising, transporting, storing, distributing, cleaning or desinfecting – Hupfer helps you optimise work processes, increase occupational safety and guarantee the highest standards of hygiene for cleaning, disinfecting and sterilising.

With decades of experience, in-depth knowledge of the industry and comprehensive solutions, we support planners, specialist dealers and users, so that everyone involved can be sure that they can achieve the goals we all share: safety, cost-effectiveness and genuinely satisfied customers, including the patients.

Your active designer
thoughout the entire logistics cycle

THE
EFFICIENCY
CREATORS

TRANSPORT-ING

STORING

STERILI-ZATION

SERVING

PACKAGING

CLEANING AND DESINFECTION

When it comes to efficiency, Hupfer defines itself as a maker, an active designer with a focus on holistic solutions and less on the individual product.

As "efficiency makers", we not only want to develop economical products, but we also want to do so as efficiently as possible. But when exactly is an activity efficient? In short, When you achieve your goals with little effort. Hupfer offers efficient solutions along the entire process chain in sterile supplies logistics.

01 Baskets and containers

Careful and structured handling of sterile supplies is the basis for many crucial processes in clinics, hospitals and sterilisation facilities. Hupfer offers a comprehensive range of baskets and containers for a wide variety of applications and requirements. They meet the highest quality standards from the material to the workmanship and guarantee optimum functionality and safety in daily use.

Sterile goods baskets

Excellent products with decisive advantages

Wire sterile goods baskets are used for transporting and storing sterile supplies in soft packaging. Some designs can be used in cabinet systems as well as in shelving systems or in combination with wall-mounted hook rails. They are also used in combination with transport trolleys and transport carts.

Hupfer sterile goods baskets are made of high-quality, electropolished stainless steel, are designed for a rough everyday life and are manufactured with care and precision for safe handling, durability and easy cleaning.

Whether stackable inside or on top of each other or for hanging on wall-mounted hook rails –
our comprehensive range of sterile goods baskets has the right solution for every requirement and area of use.

- Completely hygienic, protected transport
- Space-saving storage
- Practical provision
- Edge protection for safer handling
Sterile goods baskets

Sterile goods basket – stackable inside and on top of each other

These sterile goods baskets are designed to ensure a rapid workflow while requiring little space. They can be stacked inside each other to save space at the packing table, and then stacked on top of each other once filled. The sophisticated, carefully manufactured wire mesh structure is ideal for safe handling, stability, optimum cleaning and hygiene. Large quantities of empty baskets can be neatly stacked deep into each other, then cleaned and disinfected in a single process.

Sterile goods basket for StU

■ Stackable inside and on top of each other
■ With fold-down handles
■ Not compatible with U-shaped rails

Sterile goods baskets
ErgoSlide® sterile goods basket – stackable with innovative slide rail

The Hupfer ErgoSlide series offers extra safety and ergonomics in sterile supplies logistics. Thanks to the side rails, the baskets can be slid over each other and taken again without the upper basket slipping into the one below. For stacking, the slide rails are simply folded outwards or inwards. The robust hinges can be easily checked for dirt and cleaned if necessary.

ErgoSlide® sterile goods basket for StU

Sterile goods basket – stackable on top of each other

Stacked on top of each other, these baskets allow clearly arranged provision of working material and sterile supplies. For quick access to the stored sterile items, you will find the baskets optionally with handle openings, engagement openings or engagement slopes. Baskets filled with sterile supplies can be stacked on top of each other without any problems. They are also suitable for hanging on wall-mounted hook rails, hook frames and hook trolleys.

Instrument baskets

Hupfer instrument baskets

Hupfer instrument baskets are manufactured to the highest quality standards and meet the strict safety requirements for everyday clinical practice. Because they are carefully manufactured with smooth edges and corners, they not only provide optimum protection for instruments and soft packaging, but also safety for staff and patients during handling. The sturdy design guarantees high loading capacity and outstanding durability.

Quality with smooth edges and corners

The careful manufacturing of Hupfer instrument baskets increases safety during daily work –
to protect employees and sensitive materials.
Hupfer instrument baskets with mesh

- Burr-free top frame without sharp edges and corners and tips
- Smooth wire mesh protects the stored material
- Tissue size for optimal cleaning and drying designed
- Floor struts for high loading capacity
- Sturdy corner struts to protect from damages

Stackable instrument basket with stacking frame

- 100% connection of the floor grid through welding of each individual wire
- Upper frame welded to perforated plate
- Fine-perforated, burr-free perforated plate for the protection against puncturing of fine and pointed instruments
- Reliable cleaning and drying due to optimised hole size in wall and base
- Floor struts for high loading capacity

Hupfer instrument baskets with perforated sides

- Version without base frame to reduce condensation water
- Wide-area weight distribution for optimal protection of the soft packaging
- Upper frame welded to perforated plate
- Finely perforated, burr-free perforated plate to protect against puncturing fine and pointed instruments
- Ideally suited for the use of soft packaging as a sterile barrier system

Instrument baskets

Instrument baskets

Hupfer instrument baskets are made of high-quality electropolished round stainless steel wire and are hygienic and easy to clean. The special shape of the base frame means the instrument basket can be safely and neatly stacked on top of each other. The internal drop handles on the short sides make them particularly easy to handle.

Instrument baskets

Instrument baskets with perforated sides

With high-quality perforated sides, Hupfer instrument baskets offer particular protection from damage. This means they are suitable for very fine, pointed and conically tapered instruments as well as for sensitive soft packaging. The bottoms made of welded mesh ensure optimum drainage and ensure that no areas are missed when cleaning and disinfecting.

Special baskets
Special basket with instrument fixation

For highly specialised instruments and applications, Hupfer develops mesh baskets and special baskets that are perfectly suited to the situation in the operating room. Instrument baskets are equipped with custom-made holders and lids so that sensitive instruments are optimally fastened and protected at all times. This means they offer the ideal conditions for safe storage, transport and hygienic handling.

Transport solutions

Safe and efficient sterile supply cycles are crucial for successful work in clinics, hospitals and sterilisation facilities, hospitals and sterilisation plants. Hupfer offers integrated transport solutions tailored to the multiple, specific requirements and simple to handle as well as optimised user-friendliness.

Känguruh system

Integrated system for storage, transport and provision of sterile goods supplies

Depending on the location, the **push-in rack** is loaded with contaminated or sterile instruments. It has space for baskets and containers in StU or ISO format and keeps the instruments safe, from cleaning and sterilisation through to storage and distribution. A matching **platform** can also be used to store push-in racks, which among other things can be ideally integrated in the Hupfer Norm 5 shelving system.

The loaded **push-in rack** is pushed from the transport trolley into the sterilizer. After sterilisation, the push-in rack with the instruments can be moved directly onto the **transport trolley** and then safely taken to the storage location or to the operating theatre for further use – all without time-consuming repacking and hand contact.

Transfer via push through cupboard

Docking on to a transfer station

Advantages at a glance:

- Integrated system for storage, transport and provision of sterile goods
- No time-consuming repacking after cleaning, disinfection and functional testing
- Highest stainless steel quality for hardest use and maximum hygiene
- Excellent ergonomics and flexible handling
- All process steps without hand contact at the basket or container
- Optimisation of work efficiency and hygiene safety
- Transport trolleys, transport carts, platforms and push-in racks in many variants and special designs
- Also adaptable to driverless transport systems (DTS)
Driverless transport system with Känguruh system transport carts

External transport by lorry

Känguruh system

Custom planning and configuration

From planning through to configuration, the Känguruh system is adapted to the logistical requirements and the existing technical equipment. For example, in addition to the standard version, the transport carts are also available in fully-welded versions for maximum hygienic safety. The entire system can also be integrated into special in-house transport systems right up to driverless transport systems (DTS).

Intelligent solutions down to the finest detail

The Hupfer Känguruh system is based on many years of experience in sterile supplies logistics and the latest design and manufacturing expertise. Its unique functionality and the high quality of materials and workmanship are not only reflected in the overall concept, but also in many practical details designed for efficient and ergonomic operation.

Lengthwise and/or transverse docking are available optionally.

L-shape or U-shape profile rails for optimum matching to StU baskets and containers as well as ISO baskets.

With the optional 3 or 4-sided gallery rail, the top of the trolley can also be used for storage and transport.

Transport cart can be easily labelled with the optional paper clamp. Sign holders in various formats are available on request.

The transport cart is also available as a universal transport cart (ATW) for transporting a wide variety of goods.

The optional central lock allows fixing in position with just one foot movement.

Wired shelves and perforated plates for placing on L-shape profile rails allow a wide variety of goods and containers to be stored. Optional pull-out frame sets make work even easier.

For transport by truck, the wagons are available with special lorry transportation protection on request.

The optional transport latch with sealing option provides maximum security for the sterile supplies.

The optional sign holders provide the clearest possible overview.

Container and sterile goods transport carts

Transport carts are an integral part of the supply and disposal of sterile supplies. They ensure hygienically safe transport through unclean areas as well as safe transport of used supplies to be disposed of. They can also be used flexibly for keeping goods in storage.

The transport carts are available in two versions: a cost-optimised modular version and a version with a fully-welded housing for maximum hygienic safety.

State of the art: fully-welded stainless steel housing

The stable, self-supporting and hygienically fully-welded stainless steel housing has no undercuts and thus offers optimal prerequisites for the highest hygiene and easy to clean. Due to the fully-welded housing the transport carts are washing plant suitable.

Cost-optimized: Modular construction in stainless steel

The modular version made of high-quality stainless steel is the ideal combination of proven loading capacity and cost-optimised design. This makes them a reliable and versatile asset.

Container and sterile goods transport carts

Transport carts

Wherever containers, baskets or sterile supplies have to be protected when transported or stored, enclosed transport carts are the ideal solution. Their sturdy construction, practical equipment and easy manoeuvring make them reliable companions for daily use.

Heavy-duty platform trolley

- Payload: 500 kg
- Platform height: 265 mm
- Stainless steel

	Dimensions W × D × H mm	Product code
TW/s 12 × 6	1366 × 660 × 1054	**0162578**

HUPFER

Shelving systems

Hupfer shelving systems offer tailor-made solutions for storing, stocking and providing everything from sterile supplies and working materials to consumables and equipment,
The large selection of dimensions, overlays, combination options, material and equipment variants sets no limits even to the configuration of complex shelving systems.

Hupfer shelving: designed for flexibility

Hupfer shelving can be precisely adapted to all spatial conditions. The available storage space is thus used optimally and thus economically. The principle: Each Hupfer shelving consists of 2 uprights, 4 shelves and a cross brace.

This basic shelving unit is extended with an upright and 4 shelves. If a 90° corner connection is required, this is done using corner hooks – without the need for superfluous and space-consuming uprights.

The basic shelving unit

For each basic shelving unit which is set up individually, you need two uprights.
The extension unit

For the extension unit you only need one upright for each additional section, i.e. for 2 sections, 3 uprights. Almost all shelving units can be extended in increments of 10 cm.
The 90° corner connection

For every shelving system, the 90° corner connection uses simple clip-on corner hooks (2 for each shelf). No superfluous uprights are necessary.
The cross brace

Up to 3 consecutive sections can be mounted with only one cross brace for perfect stability.

The double shelving unit

The back-to-back assembly increases the usable depth of the section. As the uprights are bolted together, there is no need for an additional cross brace compared to the single shelving unit.
The bay load is the evenly distributed load on a single shelf.

The sum of the bay loads in a section may not exceed the max. section load.

Well thought out down to the last detail

Robust
The robust stainless steel construction, high-quality components and high manufacturing quality ensure reliability and longevity even under tough conditions.

Clearly arranged
Easily attachable shelf dividers help keep things tidy. They are available for shelves in depths of 500 and 600 mm.

Variable
The individual shelves can be exchanged at any time after assembly without tools or repositioned according to the stored goods..

Stable
The standard height-adjustable screw feet compensate for uneven floors up to 25 mm.

Hygienic
The flat cross-connections are positively connected to the uprights using a state-of-the-art, patented method. This prevents blind spots and cavities to allow thorough cleaning without any problems.

Versatile
Solid shelves, polymer shelves or stainless steel louvred shelves are available for different requirements.

Protected
The equipment with flat top, base as well as side and rear panel offers reliable protection against dust and dirt.

Mobile
Some shelving types are available with castors as an optional extra and can be moved without much effort – cleaning, for example.

Norm 5 stationary shelving

The Norm 5 shelving unit sets the standards in terms of performance, hygiene and easy cleaning. Robust, versatile and long-lasting, this shelving system is available for every conceivable storage item.

Stationary shelving set norm 5 with solid shelf

Norm 25 stationary shelving

Rust-free, durable and extremely robust like the Norm 5 shelving unit, this shelf variant offers a special advantage: magnets stick to the special stainless steel alloy so that stored items can be easily, quickly and reliably labelled.

Easy Rider systems

Easy Rider systems

The Easy Rider system is the ideal solution for when storage capacity has to be increased but space is limited. Because the Easy Rider system eliminates the need for redundant aisles, this system can increase the capacity of storage rooms by up to 100 percent compared to conventional shelving systems.

All Hupfer Norm shelving units can also be attached for storing a wide variety of goods. The Hupfer **Easy Rider systems for containers or baskets**, alongside their insertion systems, are specially designed for efficient, space-saving storage of containers or Hupfer sterile goods baskets in StU and ISO formats.

UP TO 100% MORE STORAGE SPACE

Mobile shelving

Mobile shelving

Hupfer mobile shelving units combine two essential logistics functions: storage and transport. This means working material can be stored in large quantities but are always flexibly available where they are needed. Simpler work processes reduce the number of repacking operations and increase efficiency, economy and ergonomics.

With a wide selection of open and solid shelves, mobile shelving can be easily adapted to whatever items are stored on them. Smooth-running castors and practical total locks make them easy and safe to handle, even when carrying large quantities of stored items.

Wall shelving

Wall shelving

Where there is not enough space for standing units, wall shelving from Hupfer offers practical storage space within easy reach so that working material is available wherever it is needed.

Both the length of the adjustable rails and the width, depth and type of shelves can be widely varied.
This means the wall shelving can be adapted to requirements, without tools, for efficient work and flexibility.

Hupfer wall shelving is robust, can hold heavy loads and supports a wide variety of work processes without taking up additional space. Work material can be stored directly on the shelves or in wire baskets, always clearly arranged and in easy reach.

Carefully welded edges and sturdy surfaces guarantee easy cleaning and prevent damage to sensitive materials.

Medical furnishings

Hupfer medical furnishings and fixtures are characterised by their high-quality workmanship, flexibility and extreme resilience in tough conditions. MediFurn is a new generation of furnishings that sets new standards in terms of functionality, workmanship and design.
The seamlessly welded products are easier to clean and hygiene can be more reliably maintained.

MediFurn

Added hygiene: bodies with HS, H1 and H2 quality

As well as products designed to the familiar HS hygienic standard, bodies with the optimised hygienic design types H1 and H2 as per DIN 18865-9 are now available.

The new models are characterised by a fully-welded finish, with corners rounded to various spherical radii. The key benefit of seamless design is that there are no longer any gaps that secretions, blood, proteins or other liquids might penetrate.

HYGIENE STUFE H2 For **hygienic level H2**, the bases and side panels of the bodies have a seamless welded design with a spherical radius of around 20 mm on the inside. This extra large radius is ideal for particularly thorough cleaning and significantly reduces the risk of germs. H2 bodies thus also offer maximum safety in places where maintaining hygiene is particularly challenging.
HYGIENE STUFE H1 For **hygiene level H1**, the bases and side panels of the bodies are also seamlessly welded, with a smaller spherical radius of around 3 mm on the inside. H1 bodies are recommended for areas with low to moderate hygiene requirements.

HYGIENE STUFE HS **Hygiene level HS** is still the standard that is most commonly used. Bodies manufactured in compliance with this standard still have seams between the base and side panels, making intensive cleaning more difficult. HS bodies are therefore only suitable for areas where hygiene is not critical.

**The quickest fix:
plinth with magnetic lock**
*The 100 mm base is
secured to the floor frame
with a magnetic catch and
the joint can be sealed on
site with silicone if neces-
sary. This means the base
can be quickly removed for
maintenance.*

**Safe and strong:
welded shelving bolts**
*All shelving bolts sit flush
so that there are no hard-
to-reach recesses, thus
guaranteeing high cleaning
standards.*
**Easy to clean:
the hinges**
*The low installation height
and the large opening an-
gle of the hinge allow easy
and trouble-free access to
the inside of the cabinet. In
addition, the hinge can be
fitted to the cabinet without
tools.*
**Top-class protection
recessed handles**
*The handles in the drawers,
runners and cabinet doors
are all inside the contour
of the worktop, helping to
prevent collisions when
passing.*
**Universal safety:
sealing lips**
*The continuous seals on
runners and doors stop
liquids and dust from
getting in.*

MediFurn

MediFurn cleaning table systems

Cleaning tables are subject to particularly challenging hygiene conditions. To optimise hygienic safety, we equip the bodies of the MediFurn cleaning table systems to meet hygiene levels H1 and H2 on request. The seamless design avoids dirt-prone recesses, so that cleaning is easier.

The **individual modules** (sink module, cabinet with doors, drawers, etc.) are available in various sizes and designs as required.

Our cleaning table systems are also available with optional **accessories**, such as air jets, spray attachments, spray guards and ultrasonic baths.

*Our cleaning table systems are also available with optional **accessories**, such as air jets, spray attachments, spray guards and ultrasonic baths.*

***Wells** are available in a range of designs and sizes, and sit seamlessly in the work surface.*

Limitless options for a all-round safety.

The modular design of MediFurn furnishings means cleaning table systems can be created in any conceivable shape and size. They optimally combine high standards of functionality and ergonomic design. Precision manufacturing and smart solutions down to the finest detail guarantee easy cleaning and safety up to hygiene level H2.

Wall joint edge

Draining edge

*Sandwich Design*
Beaded edging and draining edge

The beaded edging stops liquids dripping from worktop while the draining edge reduces the risk of liquids penetrating the inside of the cabinet. Continuous sealing lips on the doors and runners provide additional protection.
Effective beaded edging: Stops liquids from dripping off the worktop.
*The **rear panel** for sink modules is brought forward to protect any installations behind it and **can be removed for inspection.***
MediFurn

MediFurn packing tables

Checking, sorting, cleaning, packaging – packing tables bring together a range of jobs at a single workstation. This means they have very high requirements for safe, functional and ergonomic technical equipment.

MediFurn packing tables are made completely of premium quality stainless steel and are designed to be easily adapted to the needs of individual employees.

The tables offer maximum flexibility for connection to existing building services while height-adjustable tables can be set to the ideal working height at the touch of a button. All the technical components are arranged within easy reach. On request, MediFurn packing tables are also available as mobile versions with casters.

If additional working space is required, the tray pull-out is the optimum solution, and slides back under the worktop when not in use.

Energy-efficient LED technology and high-luminosity cold-light fluorescent tubes are available to illuminate the workplace.

The connection to the on-site compressed air, electricity and network outlets is made via the central utility column which optionally reaches to the ceiling. The connections can be accessed at any time via the inspection flap.

The working height can be precisely adjusted by up to 300 mm at the touch of a button on the digital display. The standard initial heights are 750 mm and 850 mm.

The PC cabinet with a fully extendable pull-out runner has wing doors with vents to ensure the circulation of air around computers and other equipment prone to heating up.

To avoid cable clutter, all connecting lines and cables can be routed along the trough over almost the entire width.

Drawer blocks, drawers for stainless steel containers and fully extendable pull-out drawers are available for the base structure. Self-closing and wing doors are optionally available.

Medical furnishings

MediFurn tall cabinets and wall cabinets

MediFurn tall cabinets and wall cabinets offer space for protected storage and guarantee organisation, versatility and easy handling at the same time. They are carefully tailored to a wide array of storage items and provide a quick and secure access to material and instruments.

They are designed to hold solid or wired shelves and can be alternatively equipped with polymer walls in StU or ISO format to store modular or sterile goods baskets.
Solid or wired shelves *can be used to store a variety of items.*

Internal polymer panels in ISO format *are available as an option for storing modular and sterile goods baskets, making it even easier to handle items.*

Panels, inclined tops and flat tops *ensure visually tidy connections all round to stop dust from collecting and to make the cabinets easier to clean.*

Drawers *in a range of sizes can be integrated as required.*

The **pharmacy cabinet** *is specially designed to provide safe storage for instruments. It can be easily pulled out to provide a perfect overview of everything inside. Holders are available for a wide range of instruments.*

Depending on the application, the **cabinet modules** *can be fitted with Medidul sections for* **StU or ISO** *to hold sterile goods basket and containers.*

Medical furnishings

Packing and work tables

Hupfer packing and work tables help operational processes by providing space to work. The table frames are completely made of stainless steel. Many models come either with height-adjustable screw feet or in a mobile version with castors. Robust, easy-to-clean tabletops and intermediate shelves extend the range of uses even further.

Tops and bases in StU or ISO sizes can be individually equipped with baskets, shelves and many other accessories. This means that important work equipment is clearly sorted and within easy reach at all times. Utility columns are available for electricity and compressed air supplies.

Ergonomics at the touch of a button

The electrohydraulic height adjustment allows the working height to be adjusted to anywhere between 850 and 1150 mm. The powerful 230-volt electric motor is protected in the cabinet under the worktop so that installations are neither visible nor get in the way.

The base can optionally be equipped with a solid shelf, a louvred shelf or a wired shelf from the Norm 5 shelving system.

Packing and work tables

Stationary packing tables

Sturdy, versatile and expandable, packing tables can be used in many different departments. The electrohydraulic height adjustment makes them especially comfortable to use. It means the packing tables can be infinitely adjusted at the touch of a button to the optimum height for fatigue-free working.

Cabinets

Push-through cupboards

The Hupfer push-through cupboard act as a barrier for the intermediate storage of goods between clean and unclean areas, as well as for delivering sterile supplies and disposing of contaminated material on Hupfer transport carts.

The stable, self-supporting and hygienic structure made of high-quality stainless steel consists of a fully enclosed housing, with two double-walled wing doors each on the clean and the unclean sides. An electromagnetic door lock prevents the doors to the clean and unclean sides from being open at the same time. Red indicator lights indicate open doors on the opposite side, and there are green buttons to release the doors underneath, provided the doors on the opposite side are closed.

Operating theatre steps

Operating theatre steps

With their sturdy construction and contoured non-slip surfaces, Hupfer operating room steps give a firm foothold for the ideal position in relation to the patient. The steps and frame are firmly screwed and can be dismantled for cleaning. The steps are of a uniform height with no overlap and are electrically conductive to ensure additional safety in the operating room. Hupfer operating room steps thus meet all the requirements of DIN EN 14183.

The Hupfer hook trolley for operating room steps is ideal for storage. Instead of the usual stacked storage, the steps are placed on separate brackets and can be easily removed as required.

Waste and laundry collector

Hupfer waste and laundry collectors ensure safe, economical processes from sorting and treatment to the professional disposal of critical materials. The extensive product range allows solutions to be tailored to the specific situation and requirements.

Waste/laundry collector

Waste/laundry collector

Hupfer waste and laundry collectors make disposal tasks very easy to carry out. This is ensured by the stable construction, different versions for various requirements and easy and safe manoeuvring on smooth-running castors.
