Eutectic plate for keeping pre-cooled meal components cold.

Plate in hygienic and food-safe design made of high-quality light grey polyethylene, resistant to typical kitchen detergents and disinfectants, filled with coolant that is harmless to health and the environment. Two handle openings on the narrow sides for secure grip. Keeps its shape during freezing and thawing as well as during cleaning in the dishwasher up to 95 °C. The necessary cooling temperature is at least -18 °C with a minimum cooling time of 15 h. Note: the cold storage plate must be completely frozen through in order to become fully efficient. Any liquid in the cooling brine considerably reduces its performance.
